## AIS data from Kystverket

Lambda architecture with Spark Streaming and StreamSets

#### Demo to show:

- how streaming data can be used on Spark/Hadoop in a lambda architecture («real time» + batch)
- how an ETL pipeline can be built with StreamSets
- how Solr and Hue can be used to get a quick view of large batch data

Data prepp (not always so fun)

Analytics (fun...)

#### Data source:

#### Se skipsbevegelser i sanntid

AIS viser skipsbevegelsene til skip over 45 meter opptil 12 nautiske mil fra kysten. AIS-data hentes inn fra Kystverkets 50 basestasjoner langs kysten som fanger opp signaler fra alle skip over 300 bruttotonn som seiler i internasjonal fart.
